Mundo Pixar Experience London.

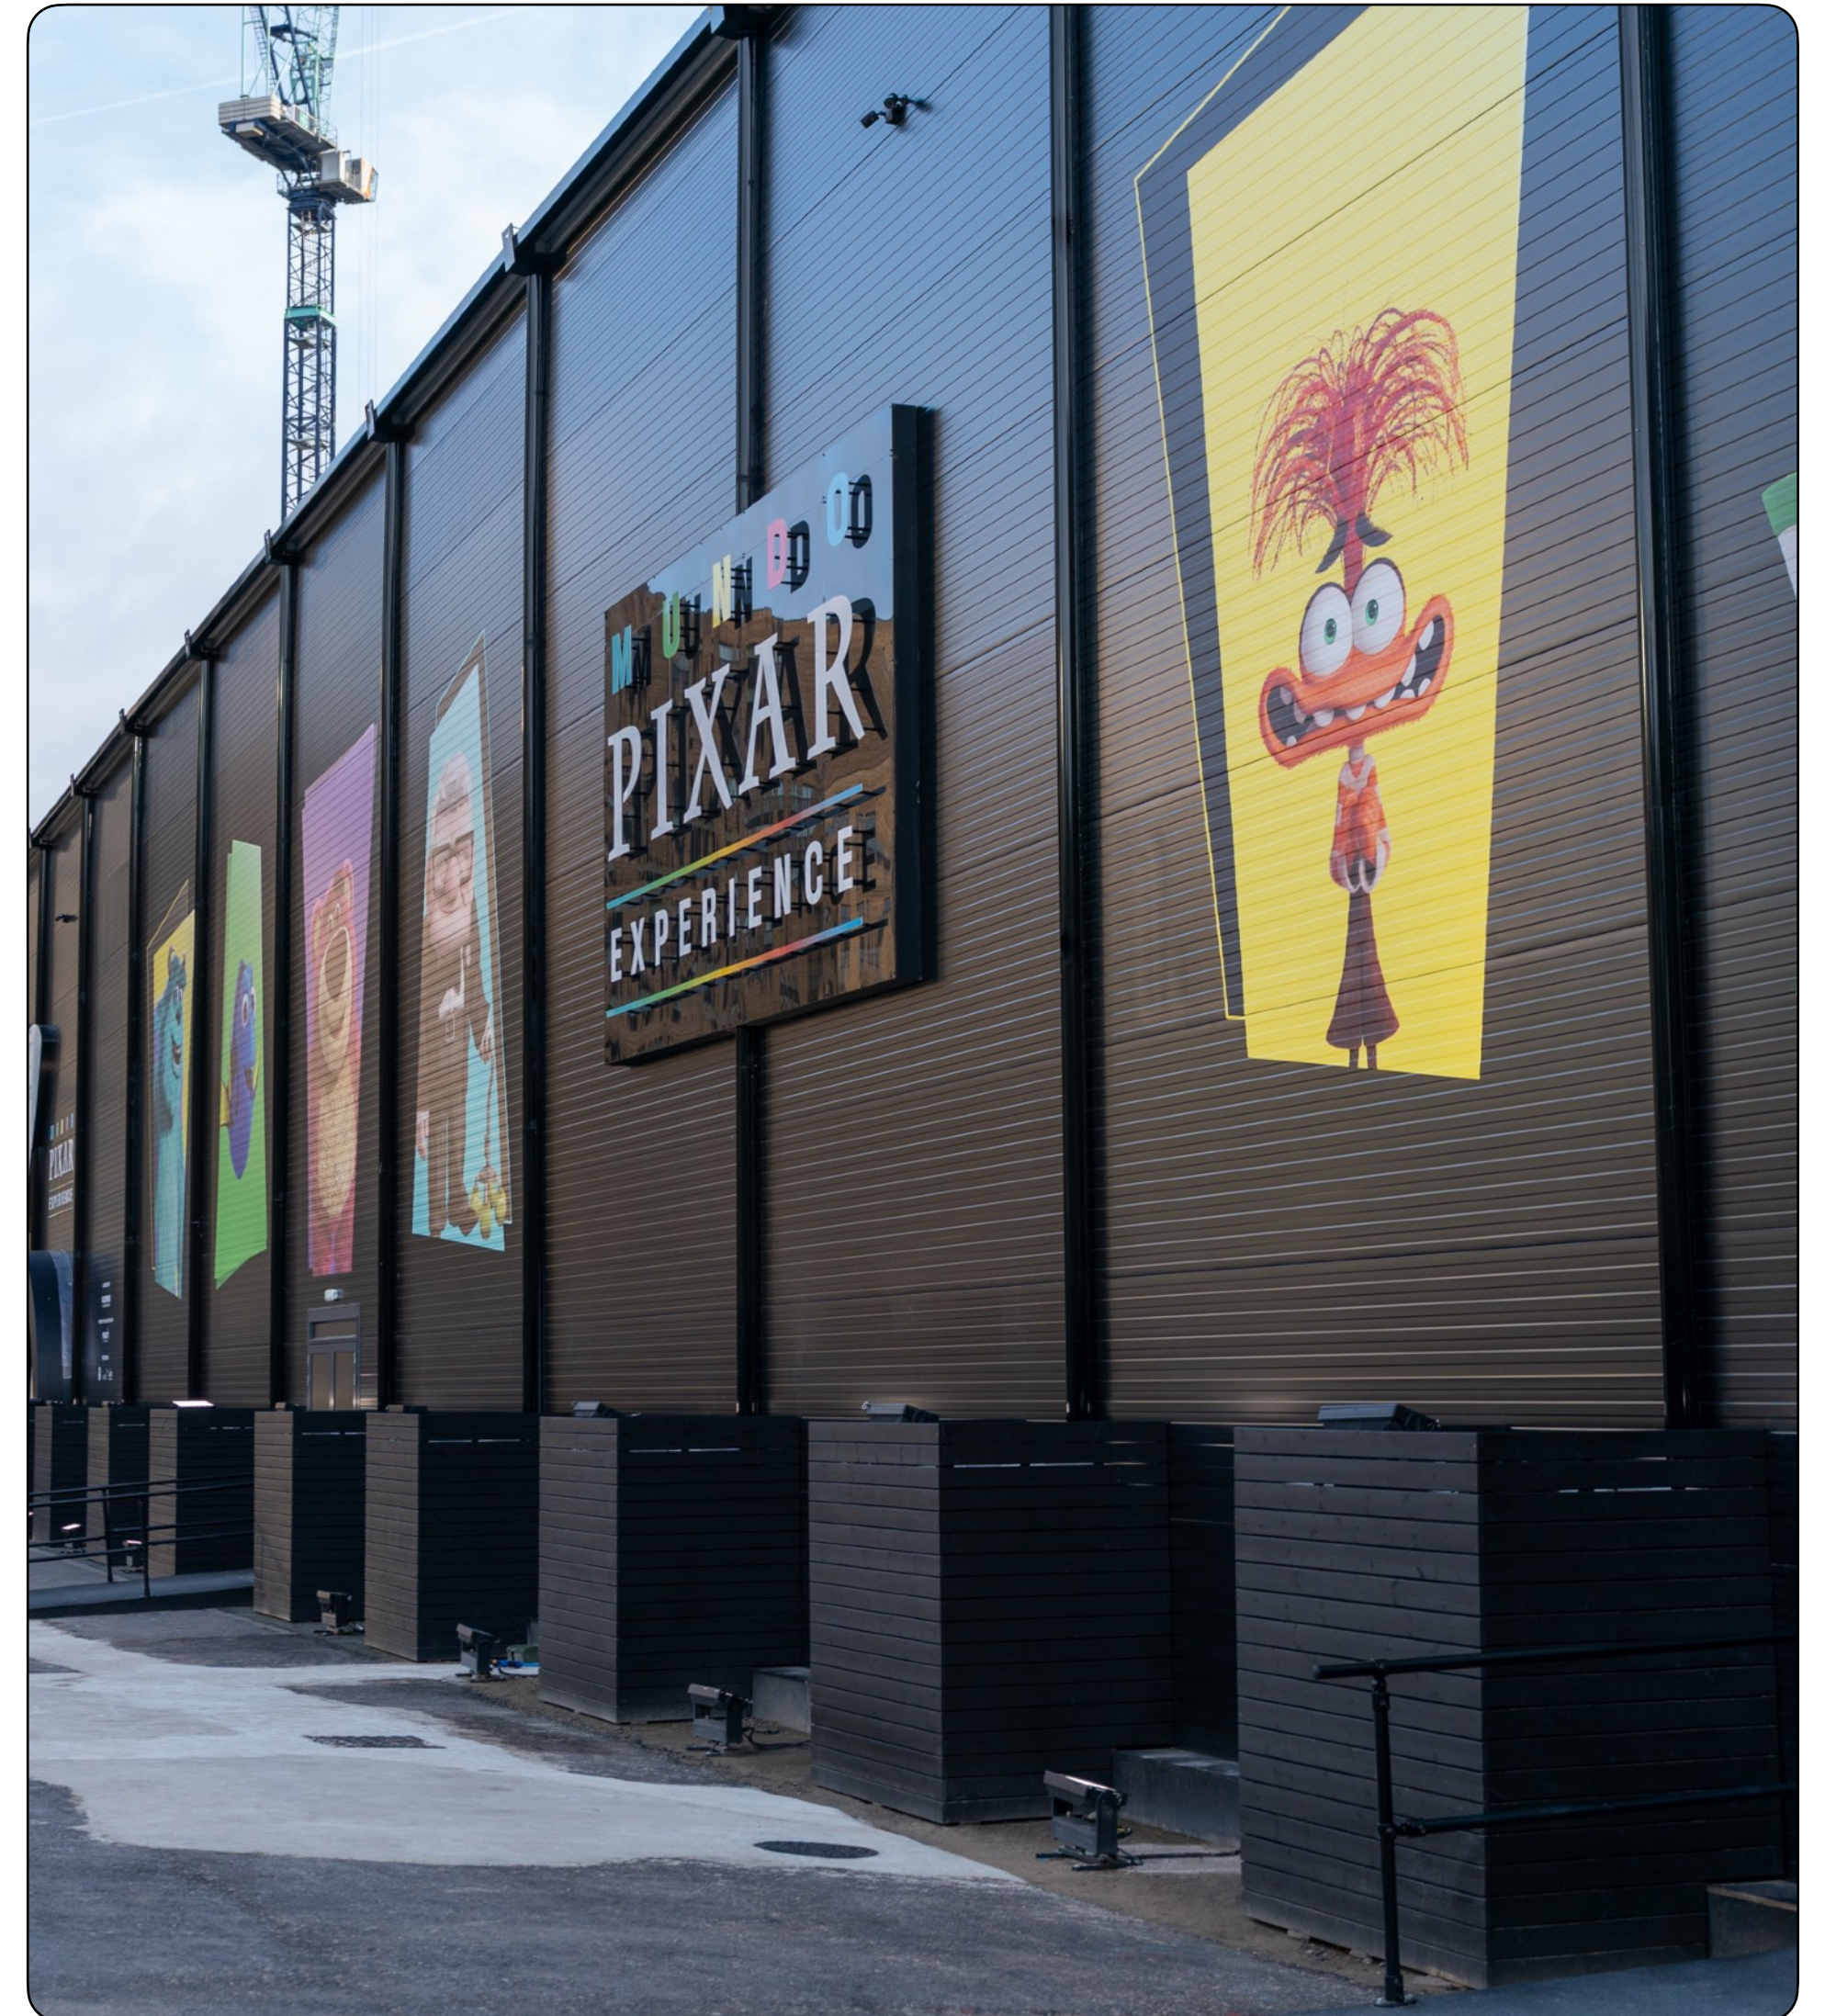

Case study.

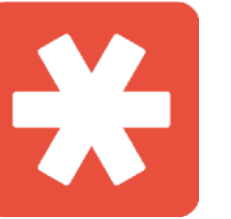

Mondo Pixar.

Client	Luna Entertainment Group
Date	2026
Sector	Entertainment
Services	Design & Build, Modular Structures

Mundo Pixar.

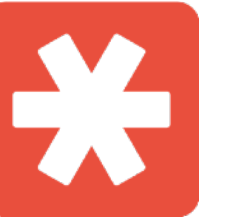

Project summary

Star Live was appointed by Luna Entertainment Group to deliver the purpose-built venue for Mundo Pixar Experience London – an immersive exhibition bringing some of Pixar’s most recognisable stories to life through large-scale walk-through environments.

Located on a meanwhile site in Wembley Park, the semi-permanent modular structure was designed and delivered as a fast-track entertainment venue capable of supporting one of the world’s largest Pixar exhibitions.

The challenge

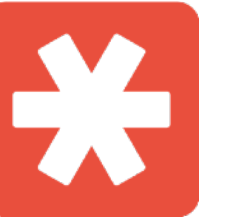

The project required the delivery of a large-scale visitor attraction within a temporary structure, while still achieving the quality, functionality and operational standards expected of a permanent entertainment venue.

The building needed to provide expansive uninterrupted internal space for immersive scenic installations, while also accommodating visitor circulation, technical infrastructure, HVAC systems and guest facilities.

With a fixed exhibition launch date in place, the programme was highly time-sensitive, demanding rapid coordination across design, fabrication and on-site construction.

Mundo Pixar.

Our approach

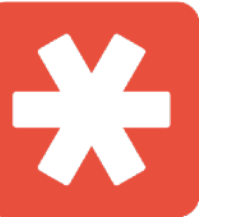

Star Live delivered a full turnkey design and build solution, transforming the Wembley Park meanwhile site into a dedicated immersive exhibition venue.

Working collaboratively across engineering, fabrication and site delivery teams, the structure was designed to maximise clear-span internal space while maintaining flexibility, speed of installation and operational performance.

The modular building was engineered to create over 3,500 sqm of uninterrupted exhibition space, with internal heights reaching 10.9 metres to accommodate large-format scenic environments and immersive installations.

Mundo Pixar.

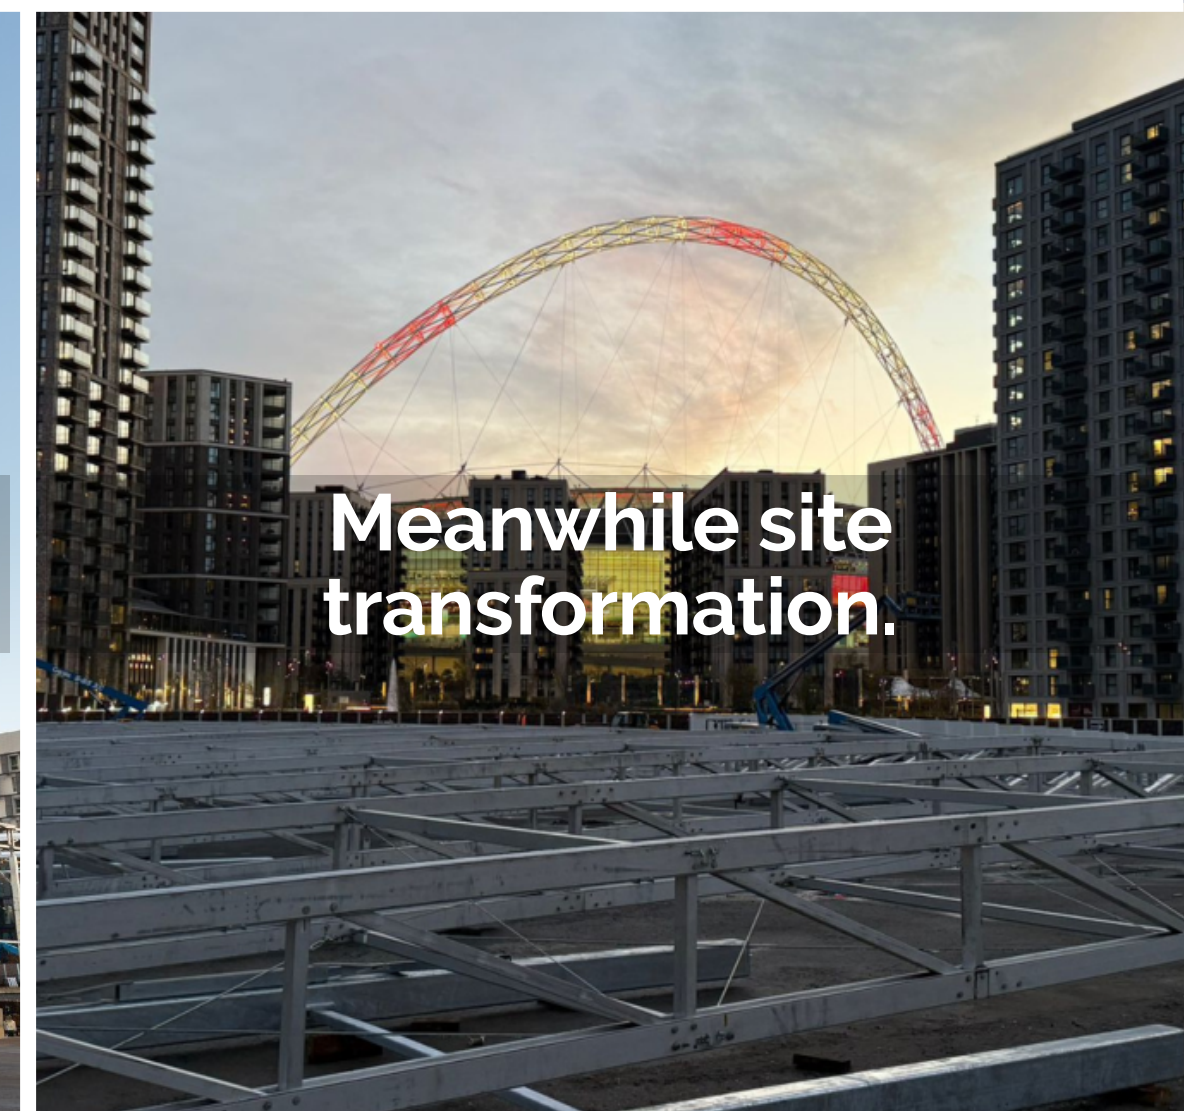

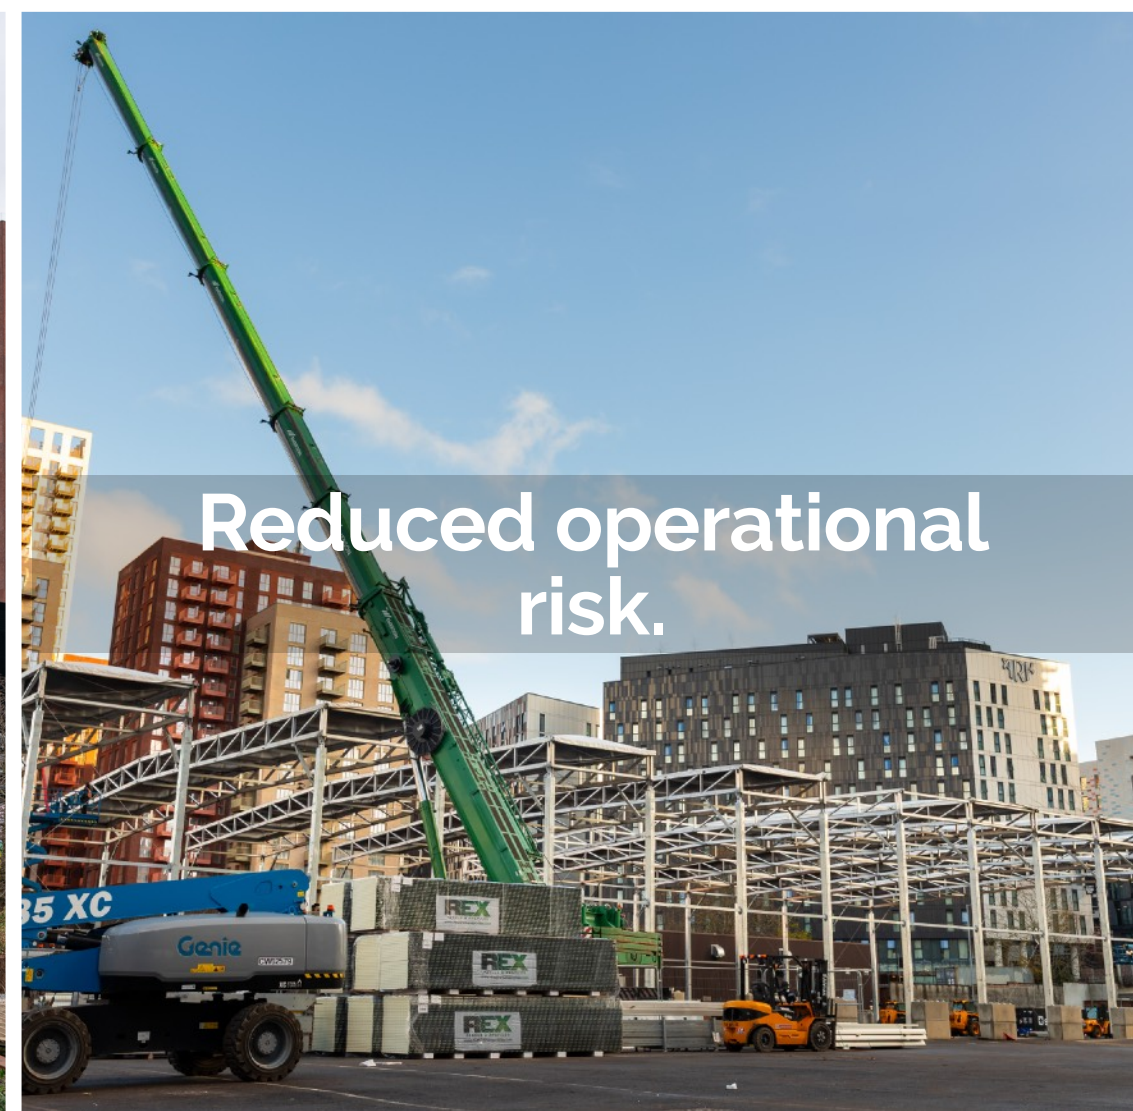

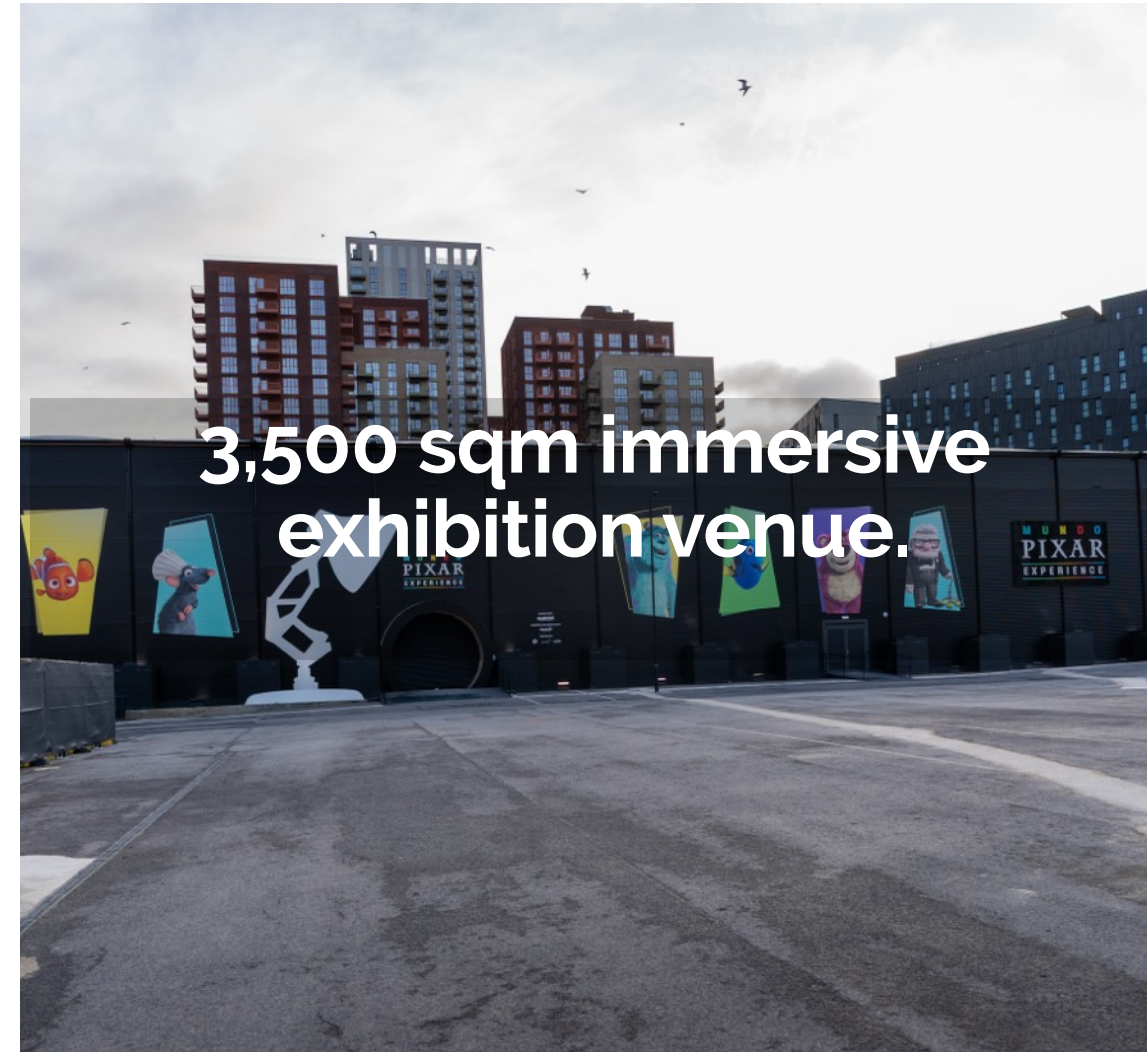

Delivery

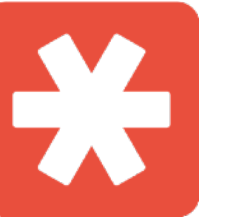

Delivered on a 45-day programme, the project involved coordinated steel installation, major crane operations and continuous on-site activity to maintain momentum against the exhibition opening schedule.

Star Live managed the full construction process, including structural assembly, integrated HVAC systems and visitor infrastructure, ensuring the completed venue met all operational, safety and compliance requirements.

The result was a high-performance modular venue delivered at speed without compromising visitor experience or build quality.

Mundo Pixar.

Outcome

The completed venue now houses *Mundo Pixar Experience London*, providing a purpose-built home for one of the largest immersive Pixar exhibitions ever created.

The project demonstrates Star Live's ability to deliver complex large-scale modular architecture for entertainment and immersive experiences — combining speed, flexibility and permanent-standard delivery within demanding programmes and constrained urban sites.
